

Avoid crouching down over 5,000 times a day

Manual Debrother desbrotador manual

PATENTED MODEL
DABAYMA

The 'Manual Shoot Remover' is a tool designed to remove fresh buds (green pruning, shoot removal, trimming, weeding, etc.) from grapevines, olive, almond, fruit and ornamental trees, etc. It operates easily and quickly - without any need for the worker to bend down - using opposing brushes at particular angles to drag away the shoots around the trunk without damaging it. It can be adapted to different trunk diameters (1 cm to 16 cm) thanks to a system that allows the brushes to be spread apart to the desired diameter.

ADVANTAGES:

- Easy-to-use
- Ideal for first year plantations as no harm is done to the trunks
- Ergonomic body position while working, thus avoiding occupational ailments (back pains, ...)
- Capacity of 1100 plants/hour in young plantations
- Saving of 35 min/Ha, for a saving of 2.2 hours/work day
- Long-lasting brush: over 60,000 plants

 1 person  1 hour  1 Ha.
